

# COX

## BUSINESS

### Partnering with businesses for reliable business-grade communications

Cox Business, the commercial division of Cox Communications, provides voice, data and video services for more than 355,000 small and regional businesses nationwide. These include health care providers; K-12 and higher education; financial institutions; and federal, state and local government organizations. Cox Business also serves most of the top-tier wireless and wireline telecommunications carriers in the U.S. through its wholesale division.

### Empowering governments with modern cloud solutions

OpenGov was founded in 2012 by Zac Bookman, Joe Lonsdale, and technologists from Stanford University, who studied government budgeting in the aftermath of the Great Recession. They observed that dedicated public servants struggled against outdated technology. This prevented them from accessing timely spending information and communicating their priorities to residents and elected officials. Believing there was a better way, they built modern cloud software designed exclusively for government.

Today, OpenGov is the leading government software provider, with cloud-based solutions including Budgeting & Planning, Permitting & Licensing, Procurement, Cartegraph Asset Management, Financials, and Tax & Revenue. More than 1,900 public agencies nationwide form a growing network leveraging OpenGov to operate more efficiently, adapt to change, and strengthen public trust.

## HOSPITALITY SERVICES

### Elevating hospitality with cutting-edge technology integration

Hospitality Network (HN), an affiliate of Cox Business, provides technology and integration services to hotels, convention centers, stadiums, arenas, airports, and special events throughout the United States. We help our clients achieve their hospitality vision by leveraging our deep understanding of the hospitality industry. Backed by Cox Communications, one of the nation's leading telecommunications companies, HN has worked for more than 40 years with leading brands, leveraging our technology, experience and ingenuity to elevate hospitality and event experiences. HN has a staff of experienced engineers, project managers, designers and technicians that world-class hospitality brands depend on daily to enhance the experiences of their guests and visitors.

At the heart of HN's technology is integration. Travelers today are looking for hotels and venues that match the technology experience they've grown accustomed to at home. New innovations have brought on the advent of smart hotels and smart rooms. HN can deliver and integrate the latest hotel technologies to your property. HN is focused on delivering and integrating the latest hotel technologies such as; connectivity, mobility and Managed Wifi, In-Room Entertainment and Way finding. In a world where every customer experience is either phenomenal or forgotten, Hospitality Network (HN) creates engaging and delightful moments for customers, turning the routine into the remarkable.

## BLUEPRINTRF™

### Redefining hotel networking with custom-built solutions

In 2011, Blueprint RF took hotel networking back to the drawing board. Rather than reverse-engineer modems made for offices, we created an entirely new system and designed software specifically for hospitality. The logins, upgrade options, data collection, dashboard, and security were all made to meet the needs of hoteliers. Since we were the first to pioneer the technology, no one today comes close to our understanding of your requirements. Our systems are a watchman for your property. We custom-build the best network for your specific layout and constantly monitor for maximum speeds, safety, and internet connectivity. Often, we can prevent issues before they occur.

Blueprint RF has earned a reputation for excellence. That's why industry-leading brands like Marriott, Hilton, Hyatt, and Great Wolf Lodge choose us as their approved network provider. We help hotels improve their guest experiences.

We don't just service hotels. We also service marinas, equestrian centers, and restaurants. From planning to installation, architecture, support, and maintenance, we keep everything in one place for seamless end-to-end deliverability.

Most companies add more products. We create better service. We have the best infrastructure. Our delivery is efficient. And our people care. You'll have cutting-edge architecture supported by great employees—and your hotel will be another step closer to providing the ultimate guest experience. You'll experience the difference in your reviews.

## Private Networks

### Solving connectivity challenges with tailored private wireless network solutions

Cox Private Networks launched in 2022 as part of Cox Communications. We deliver private wireless network solutions designed to solve customers' specific connectivity challenges that traditional network mediums alone cannot solve. We utilize a tailored mix of wireless technologies, such as private LTE/5G and mmWave spectrum, to offer a fully managed service from design to deployment to ongoing support of network management.

CPN provides wireless network extension—a reliable and cost-effective last mile connectivity coverage. It also offers private cellular connectivity, a dedicated and reliable LTE/5G cellular connectivity, and neutral host public cellular—an enhanced cell phone coverage for indoor environments. CPN serves a myriad of industries, such as manufacturing, warehouse/distribution, healthcare, campus-based environments, hospitality, higher education, smart cities, retail, large public venues and K-12 education.
